TRAINING OFFERES

VNon Destructive Testing (NDT)

- NDT by UT1 and UT2 ultrasound,
- NDT by RT1 and RT2 radiography,
- ECT1, ECT2 eddy current control,
- MT1, MT2 magnetoscopy,
- VT1, VT2 visual examination of welds,
- Liquid penetrant: PT1 and PT2,
- Control by MFL.

Welding

- Arc welding : TIG, MIG/MAG, …,
- Welding of different materials (steels, aluminium alloys,...),
- Friction stir welding.

Materials, r netallurgy

- Heat treatment of materials,
- Mechanical testing of materials,
- Metallographic analysis,
- Materials characterization (SEM, XRD
- ,EBSD...).

Corrosion

- Corrosion of metallic materials (causes, mechanisms and anti corrosion protection),
- Corrosion inhibitors,
- Anti-corrosion coatings,
- Monitoring and measurement of

corrosion potential.

OUR SKILLS

The Research Centre in Industrial Technologies, under the supervision of Ministry of Higher Education and Scientific Research, embodies several research and development structures at the national scale (the east, center and the west of Algeria).

The CRTI is generally specialized, in the field of industrial technologies. Its areas of interest including:

- Non-destructive testing (NDT),
- Thin films and coating technology,
- Aero-inspection of industrial installations (drone),
- Welding and joining techniques,
- Steel industry, metallurgy and mechanics,
- Corrosion and materials durability,
- Control of manufacturing processes,
- Qualifying training (Welding, NDT, Metallurgy, Corrosion, ...), in Industrial Technologies
 - Accompanying industrial companies with in view of their accreditation according to ISO referential 17025,

Calibration of NDT equipments and temperature measuring devices using standards traceable to the International System of Units (SI),

Mechanical testing and chemical analysis in compliance with ISO/IEC 17025

Welding Technology

- Arc welding, TIG, MIG / MAG, submerged arc welding, ...
- Approbation of welders.
- Elaboration and qualification of welding procedures.

Mechanical Testing

Mechanical testing of materials :

Tensile testing, fatigue, bending, resilience, hardness, micro hardness, ...

Nano and micro indentation.

Material Analysis

- Micrographic and macrographic observation of materials.
- Chemical analysis of materials composition.
- In-situ chemical composition analysis.

Control Of Manufacturing Processes

Non-destructive Testing

- Ultasonic control of industral installations.
- Ontrol of pipelines by guided waves
- Control of welds by radiography.
- Control of industrial installations by magnetic and electromagnetic techniques.

Calibration / Metrology

- Calibration of measuring devices thermometers, thermometers, recorders, climatic chambers, etc.)
- Verification of measuring instruments(caliper, palmer,...)

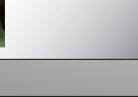

Corrosion

O Diagnosis phenomena installations.

of

of

Monitoring installations bv thermography.

industrial infrared

- Monitoring rotating machines by vibration analysis.
- Quality control of processes and products.

Calibration of NDT equipments (ultrasonic and eddy current flaw detectors, thickness gauges, yokes, radiometers/lux meters, hardness testers, etc.)

temperature (infrared probe digital temperature

corrosion industrial

cathodic

Dimensioning of protection systems.
